

## **Instructions for Replacing the Umbrella Valve in the Suction Pro**

1. Remove the white porous muffler. (A new muffler is provided, so it is acceptable if the old one is destroyed during removal.)
2. Remove the blue umbrella valve.
3. Clean the area surrounding the valve to ensure a good seal.
4. Insert the valve stem of the new umbrella valve into the center hole.
5. Press on the bottom of the valve until the flange on the valve stem is through the hole.
6. Insert the new white porous muffler.
